TEST REPORT

Patient Name	: **Mr. BIPUL CH BORO**		
Age / Sex	: 45 Y/Male	Registration Date	: 06/Sep/2024 12:30PM
Test Req. Id/ED No.	: 012409060091	Sample Collection	: 06/Sep/2024 12:36PM
Address	: KWAKTA CRPF	Authenticated on	: 06/Sep/2024 03:39PM
Referred by	: Self	Print Date/Time	: 06/Sep/2024 03:49PM
Centre	: OASIS CLINIC AND DIAGNOSTIC CENTER		

Department of Biochemistry

THYROID FUNCTION TEST

Test Name	Result	Unit	Ref. Range
Triiodothyronine, Total (T3) Method : Electrochemiluminescence (ECLIA)	1.55	ng/mL	0.80 - 2.0
Thyroxine, Total (T4) Method : Electrochemiluminescence (ECLIA)	8.77	µg/dl	5.1 - 14.1
Thyroid Stimulating Hormone (TSH) Method : Electrochemiluminescence (ECLIA)	0.82	µlU/ml	0.27 - 4.2

Sample type: Serum

Test has been performed on Cobas e411

INTERPRETATION
Serum TSH concentration is dependent upon a multiplicity of factors:
hypothalamus gland function, thyroid gland function, and the responsiveness of pituitary to TSH. Thus, TSH concentration alone is not sufficient to assess the clinical status.
Serum TSH values may be elevated by pharmacological intervention, Domperiodone, amiodazon, iodide Phenobarbital, phenytoin have been reported to increase TSH levels.
A decrease in TSH values has been reported with the administration of propanolol, methimazol, dopamine, and d-thyroxine.
